

Flashcards user guide

This guide explains how to turn your course material into flashcards and use them for revision.

The revision flow

1. Sign in.
2. Create a deck for a topic or module.
3. Choose how to add content.
4. Generate cards when using an AI source.
5. Review the cards before adding them to your deck.
6. Practise with Study, Quiz, or Self-check.

Return to the final step whenever you revise and add or edit cards as your understanding develops.

1. Sign in

- Sign in with your university account. The Your decks page is your starting point and lists all your revision decks.

2. Create a deck

- On Your decks, type a name such as 'Week 3: Cell biology' and select 'Create deck'.
- Open the new deck and select 'Add cards'.
- Use one deck per topic, lecture series, or assessment area. [Using distinct, clear deck names makes it easier to return to the right material later]

3. Choose a source

The 'Add cards' page provides four ways to create cards.

- Create a card [manual]: write a question, answer, and optional comma-separated tags yourself.
- Paste cards [AI-enabled]: paste any amount of study text, lecture notes, or other source material. No tab, pipe, or special line format is needed.
- From PDF [AI-enabled]: upload a PDF such as lecture slides.
- From link [AI-enabled]: enter a public webpage URL.

For pasted text, PDFs, and links, the system uses AI to prepare draft cards. You can choose the maximum number of cards it should draft.

4. Generate cards

For an AI-enabled source, select Draft cards with AI (or paste/upload/import source). The app creates a generation job and takes you to the AI generating page.

Generated cards are drafts: they are not added to your deck automatically. This lets you check/review their wording and accuracy before accepting.

5. Review drafts

On the AI review page, work through each draft:

- Accept adds the draft to the deck.
- Edit lets you change the question or answer before accepting it.
- Discard removes a draft you do not want.

When you accept a newly generated card, choose whether it should be available for quizzes. In addition, you can also select AI review from an existing deck to have AI identify potential factual or clarity issues; review any suggested changes before accepting them.

6. Select mode

Open a deck and choose the mode that best fits your revision session.

Study –

Select Study to see one card at a time. Click the card to reveal the answer, then choose:

- Again, if you did not recall it.
- Hard, Good, or Easy to schedule the next review interval. This keeps the card available in Study.
- All done if you no longer want the card to appear in Study.

Change those intervals from Study settings in the top bar.

Quiz –

Select Quiz, then choose one of these question formats:

- Multiple choice: choose an answer from the available options.
- Fill in the blank: type an answer; it is processed by AI before you continue.
- Mix: combines multiple choice and fill-in-the-blank questions.

The quiz does not reveal whether an answer is correct while you are taking it. Your score, correct answers, and fill-in feedback appear together at the end.

Self-check

Select Self-check to answer each card in your own words. Submit your response to receive an AI score, feedback, missing points, and the reference answer.

N.B: Organize and improve your deck

- Add tags when creating or editing manual cards, then use the tag filter in the deck to focus on a topic.
- Click a card's difficulty label to set it to Easy, Medium, or Hard. This helps you choose balanced quizzes.
- Use Edit card to update a question, answer, or tags.
- Use Delete card to remove a card permanently.
- Use Export (Anki) to download your deck for Anki.
